

Golden Valley Health Centers (GVHC)

i2i Tracks Population Health Management Platform is Helping GVHC Identify High Risk Patients "Hiding in Plain Sight".

Challenge:

Introduced to the CDC Million Hearts® initiative by i2i Tracks, Golden Valley Health Centers (GVHC) leveraged their PHM solution to address at-risk patients with cardiovascular disease.

Solution:

With i2i Tracks Population Health Management Platform, the GVHC team is able to screen, diagnose and treat patients more quickly and efficiently.

Golden Valley Health Centers (GVHC) cares for people from all walks of life living in central California and operates four school-based health centers, two freestanding women's health centers, eight dental facilities and two homeless healthcare programs. As an organization committed to serving residents in the communities they serve, regardless of their ability to pay, GVHC is constantly seeking ways to deliver better care while controlling costs.

Recently GVHC joined the Million Hearts program – an initiative driven by the CDC and CMS which is dedicated to preventing 1 million heart attacks and strokes by 2017. To support the success of Million Hearts in their area, GVHC decided to leverage i2i Tracks Population Health Management Platform to help providers shift from missed opportunities to proactive care management of patients with and at risk for cardiovascular disease.

Recently GVHC decided to leverage i2i Tracks Population Health Management Platform to help providers shift from missed opportunities to proactive care management of patients with and at risk for cardiovascular disease.

"We're saving more lives with i2i Tracks Population Health Management Platform."

"So many lives are being saved thanks to i2i Systems' incisive tools and we could not have done it without them."

— RAllyse Alford, Project Manager at GVHC —

Just a few months after launching the program, GVHC uncovered 1,513 high risk patients who needed hypertension screening. As a result, 805 were screened and 134 of those (17%) were diagnosed as hypertensive. The analytics engine within i2i Tracks played an instrumental role in uncovering these at-risk patients who otherwise might not have benefitted from early interventional care.

Allyse Alford, Project Manager at GVHC sums up the results of their partnership with i2i well. "So many lives are being saved thanks to i2i Systems' incisive tools and we could not have done it without them."

i2i Population Health is proud to support the Million Hearts® initiative to help clients, the CDC, and CMS prevent one million heart attacks and strokes by 2017.

As well, i2i Systems is partnering with the National Association of Community Health Centers to capture additional statistics for the project, specially targeting hypertension.
