

Drive Quality Performance and Improve Patient Outcomes

i2iTracks is the ground-level population health management solution used by healthcare organizations across the US to improve quality and drive practice performance. i2iTracks aggregates clinical and operational data from EHR, PM and other systems, presenting a comprehensive patient view with actionable insights to improve care across the community. Healthcare organizations use i2iTracks to improve quality outcomes, close care gaps, manage chronic conditions and coordinate care - improving outcomes across the populations they serve.

Connecting 300+ Federally Qualified Health Centers, Practices, Critical Access and Rural Hospitals, PCA/HCCNs, Indian Health Services and Health Plans, impacting 30M people in 39 States, the i2iTracks platform provides a single source solution for quality management, care coordination and analytics. Powerful point-of-care workflow tools improve quality program performance, with deep EHR and PM integration - leveraging hundreds of measures & flexible analytic tools to improve care.

i2iTracks Capabilities

Drive Quality Improvement

- Manage quality and grant programs based on health center's needs
- User defined, on-demand reporting with configurable ad hoc analytics tools
- Quality report library with flexible measure logic & scorecard design
- Enterprise analytic and data mining tool to monitor and drive best practices
- Robust payer collaboration and data exchange, including the ability to manage health plan attribution and care gap files

Workflow Optimization

- Create alerts and protocols to inform care teams of gaps in care prior to patients being seen
- Proactive management of populations through morning huddle reports, visit summaries, custom quality reports, patient registries, and user defined queries
- Analytic query engine that stratifies patient populations to prioritize engagement & care actions
- Ability to drill into patient lists from quality reports and take immediate action (recalls, follow-ups, and patient engagements)

Care Coordination

- Comprehensive view of patients with near real time clinical information to drive timely and accurate clinical decisions
- Collect and analyze SDoH data to identify barriers of care for served populations
- Unlimited cohort creation to easily identify care gaps across the patient population to help drive closure
- Custom integration of population health/disease registries that incorporate into care plan management tools
- Track referrals from beginning to end and ensure patients are following up with specialist based on status

The implementation of i2i Population Health enhanced our quality improvement program by providing the tools we needed to effectively manage our patient population, resulting in improved patient outcomes and enhanced patient satisfaction.

– Megan McMillin, RN,BSN, Chief Nursing Officer, Cumberland Family Medical Center, Inc.

i2iTracks Benefits

- **Data Driven Insight-** Gives your frontline care teams the insight they need to ensure patients receive the right care at the right time for improving chronic disease management and promoting greater patient compliance for wellness and preventive care
- **Clinical Decision Support-** Enables management teams to improve performance by making data-driven decisions based on comparative analytics and benchmarking
- **Access to Accurate, Key Quality Measures-** Supports QI staff in identifying areas needing improvement and monitoring the progress of QI initiatives across the entire organization
- **Proactive Disease Management and Care Coordination-** Helps providers identify and manage their panels proactively between visits, ensuring guidelines of care are adopted and quality and financial goals are achieved

i2iTracks Functionality

- A "home screen" that can be customized for each particular user's role and responsibility
- Task, Recall, and Follow-up management tools
- Wizard-driven ability to easily create user-defined queries and reports at the patient level
- All i2iTracks queries are actionable with many patient outreach options
- Create and manage unlimited disease and condition tracking types (disease registries)
- Close the loop on referrals with comprehensive tracking and reporting on referral status
- Measures in reports support a target value with applicable, easy-to-see graphics
- Reports are easily printed or exported to Excel, HTML, or text format

About i2i

Our Mission

Serving Others for
Healthy Communities

Our Vision

Better Care means Better Life

Our Beliefs

i2i believes each community and person wants a happy, healthy life.

Let's activate better care!

We are a population health technology company.

- Integrating and aggregating all types of data is our strength.
- Creating innovative apps that improve quality and power care coordination is our demonstrated value.
